

Erasmus+ KA2 Strategic partnerships for school education project  
“How to Raise an Inventor. Technology and engineering learning material for schools”

Project no.: 2017-1-LT01-KA201-035284

**MODULE DESCRIPTION AND  
RECOMMENDATIONS FOR TEACHERS**

Name of the module	micro:bit MAKER lessons															
Creators	DevLab Academy (the Netherlands)															
Main topics	Learning to program a micro:bit with additional components, in order to make nice things															
Available in these languages	English, Dutch, Polish, Lithuanian, Latvian															
Recommended age group	11-14 years of age															
Length of the course	Min. 14 lessons, maximum 38 lessons.															
Duration of each lesson or project	Tool consists of 7 projects. Each project consists of Lesson 1 (2 hours) and Lesson 2 (2-4 hours). The time for the second lessons (part 2) can be longer, depending on the ideas of the students. As a teacher you can add an extra step in the second lessons, where you check the necessary time.															
Required hardware	<p>micro:bits, servo-motor, RGB led, wires, speaker and some basic building materials like paper, wood, etc. To have an easy start, see also: <a href="https://learn.sparkfun.com/tutorials/getting-started-with-the-microbit/all">https://learn.sparkfun.com/tutorials/getting-started-with-the-microbit/all</a> Approx. costs for purchasing required hardware:</p> <table border="1"> <tr> <td>1 micro:bit</td> <td>€17.50</td> </tr> <tr> <td>1 usb-cable</td> <td>€2.00</td> </tr> <tr> <td>1 batteryholder</td> <td>€2.00</td> </tr> <tr> <td>Some wire</td> <td>€1.00</td> </tr> <tr> <td>RGB-led</td> <td>€0.25</td> </tr> <tr> <td>Servomotor</td> <td>€4.00</td> </tr> <tr> <td>Piezo speaker</td> <td>€2.00</td> </tr> </table>	1 micro:bit	€17.50	1 usb-cable	€2.00	1 batteryholder	€2.00	Some wire	€1.00	RGB-led	€0.25	Servomotor	€4.00	Piezo speaker	€2.00	
1 micro:bit	€17.50															
1 usb-cable	€2.00															
1 batteryholder	€2.00															
Some wire	€1.00															
RGB-led	€0.25															
Servomotor	€4.00															
Piezo speaker	€2.00															
Required software	<p>Just go to <a href="https://makecode.microbit.org/">https://makecode.microbit.org/</a> The programming environment is fully web-based, so no need to install any software Alternatively there is a Windows10 app which also enables micro:bit programming.</p>															
Required skill level (pupils)	No programming skills required before start															
Required skill level (teachers)	Some introduction in micro:bit and micro:bit block editor programming required. Workflow of the editor must be clear to the teacher.															
Skills developed in the module	<table border="1"> <thead> <tr> <th></th> <th>Lesson 1</th> <th>Lesson 2</th> </tr> </thead> <tbody> <tr> <td>Creativity</td> <td>*</td> <td>*****</td> </tr> <tr> <td>Technological and engineering</td> <td>***</td> <td>****</td> </tr> <tr> <td>Critical thinking and problem solving</td> <td>**</td> <td>*****</td> </tr> <tr> <td>Communication</td> <td>*</td> <td>***</td> </tr> </tbody> </table>		Lesson 1	Lesson 2	Creativity	*	*****	Technological and engineering	***	****	Critical thinking and problem solving	**	*****	Communication	*	***
	Lesson 1	Lesson 2														
Creativity	*	*****														
Technological and engineering	***	****														
Critical thinking and problem solving	**	*****														
Communication	*	***														

What pupils will learn?	They learn “Computational Thinking” which is defined as: “reformulating problems in such a way that they can be solved with computer technology” and applying these skills on self-invented making projects
The structure of the course	7 predefined making lessons, each of them in another application ‘world’, each followed by a working canvas in order to apply the learned skills on a self-invented project
What is different about this teaching material comparing to others for the same topic?	The challenge to convert lessons learned into self made projects, stimulating creativity in combination with computer technology
What teaching materials do pupils get?	Instructions either on paper or online in the editor environment
What teaching materials do teachers get?	Accompanying teacher guide
How to reach the material?	Material can be found here: <a href="https://www.micro-bit.nl/maker-eng">https://www.micro-bit.nl/maker-eng</a>

<p>Examples of the material</p>	<div data-bbox="617 199 823 231" data-label="Section-Header"> <h3>1 Did you know?</h3> </div> <div data-bbox="652 239 760 346" data-label="Image"> </div> <div data-bbox="769 239 1515 319" data-label="Text"> <p>One of the biggest flower auctions in the world can be found in the Netherlands. Every day, millions of flowers and plants are sold there. When they are sold, these plants will be shipped to every corner of the world.</p> </div> <div data-bbox="769 331 1523 466" data-label="Text"> <p>Imagine if you went to a (flower) auction. The price of the flowers is going to decrease gradually, and whoever presses the button first will buy the flowers. You want to buy these flowers, but obviously you also want to pay the lowest price possible. That's why you need to choose the right moment to press the button: not too early and not too late. Such a button is also used during a quiz.</p> </div> <div data-bbox="617 508 1050 541" data-label="Section-Header"> <h3>2 This is what you are going to make</h3> </div> <div data-bbox="652 548 1015 825" data-label="Image"> </div> <div data-bbox="1049 550 1515 653" data-label="Text"> <p>You are going to make buttons so that you will be able to play in a quiz. We'll program these buttons in such a way that you will know who has pushed first.</p> </div> <hr/> <div data-bbox="592 882 888 913" data-label="Section-Header"> <h3>6 A quiz for the entire class</h3> </div> <div data-bbox="615 913 1375 963" data-label="Text"> <p>Now we are going to connect all micro:bits with each other. To do this, you need to enter the following code on your micro:bit:</p> </div> <div data-bbox="625 978 883 1134" data-label="Code-Block"> <pre> on start   radio set group to 1   set blocked to false   set myPosition to 0   clear screen   </pre> </div> <div data-bbox="1122 978 1396 1054" data-label="Text"> <p>When starting, the radio will be set to group 1. All micro:bits will be in the same radio group.</p> </div> <div data-bbox="1122 1062 1408 1110" data-label="Text"> <p>Let's make two variables: <i>blocked</i> and <i>myPosition</i>.</p> </div> <div data-bbox="1122 1121 1354 1169" data-label="Text"> <p>When starting, you are not blocked yet.</p> </div> <hr/> <div data-bbox="604 1234 998 1617" data-label="Image"> </div> <div data-bbox="1019 1228 1395 1327" data-label="Text"> <p>Take the two pieces of cardboard, and wrap aluminium foil around them. Then, put a stripped cable underneath the foil of both pieces.</p> </div> <div data-bbox="1019 1337 1386 1461" data-label="Text"> <p>Take one A4 sheet and cut out a circle, and fold the sheet around the bottom cardboard. Make sure that the foil is still visible in the middle through the circle you just cut.</p> </div> <div data-bbox="1019 1472 1401 1619" data-label="Text"> <p>Take another A4 sheet and cut out one more circle. Foil it around the other cardboard, just like you have done before. Only this time, draw a button on the other side of the cardboard on the exact spot where the foil is still visible.</p> </div>
<p>Recommended projects</p>	<p>If you have limited time, skip all the second lessons. Important projects not to be skipped:</p> <ul style="list-style-type: none"> <li>- Project 2: Throwing a dice</li> <li>- Project 3: The wire loop game</li> <li>- Project 6: The quiz</li> </ul>
<p>Organization of the course</p>	<ul style="list-style-type: none"> <li>- Let the students work in small groups. 4 students is the maximum for one group.</li> </ul>

	- Change the groups for each project.
For teachers with no prior experience in the topic	- See Document: Start - Explore the micro:bit – Teacher - Build all the projects yourself first! - Learn yourself from: <a href="https://microbit.org/teach/">https://microbit.org/teach/</a>
Additional material for teachers	<u>Can be found here:</u> <a href="https://www.micro-bit.nl/maker-eng">https://www.micro-bit.nl/maker-eng</a>
Suggested next topics for pupils to get into after this course	We suggest doing more micro:bit related projects, both guided and open. After sufficient experience in block programming you can switch to text-based programming, just by clicking the JavaScript button in the micro:bit script editor.
Support	If you need assistance with the module, please contact Chris Dorna ( <a href="mailto:chris@codekids.nl">chris@codekids.nl</a> ) or Lex van Gijssel ( <a href="mailto:lex.van.gijssel@devlab.nl">lex.van.gijssel@devlab.nl</a> ). We would also be happy to receive your feedback about the module, photos and videos of using our learning material in your classes.
